Virtual Event

1

Astronomy Education in Schools in Practice (Primary and Secondary Schools)

This session will explore practical approaches to astronomy education in the classroom, highlighting effective strategies and innovative teaching practices that engage students at both primary and secondary levels.

2

Astronomy Education Research

This session will explore recent developments and findings in astronomy education research, examining methodologies, assessment techniques, and the impact of various educational interventions on learners and educators.

3

Teaching Methods and Tools

This session will focus on the many innovative ways astronomy is being taught, with practical tips on how to implement them.

4

Science Focus Session on Radio Astronomy

This session will cover the latest scientific discoveries, data and facilities in radio astronomy, highlight existing educational programs and how these topics can be effectively incorporated into educational settings.

5

Education Focus Session on Inclusive Astronomy

This session will focus on inclusive astronomy education through Universal Design principles, featuring three sub-sessions on supporting blind and partially sighted, deaf, and neurodiverse communities. It will highlight best practices for working with these groups while providing a space to share resources and expertise.
